Career Objective

Computer Science Engineering undergraduate (3rd year) and 4× hackathon winner, with strong project-based experience in Python, Computer Vision, and web technologies. Proven ability to build functional, real-world systems through collaborative development and competitive problem-solving environments. A fast learner who effectively leverages modern tools and AI to deliver impactful solutions. Actively seeking for opportunities to grow as a software engineer.

Technical Skills

- Python
- HTML, CSS, JavaScript
- Node.js
- Mobile app development
- MySQL (CRUD operations)

AI / Computer Vision:

- Face Recognition (pre-trained models), OpenCV (image processing, face detection),
- TensorFlow (model usage & integration), InsightFace (API-based recognition)

Tools & Platforms:

- Git, GitHub, Linux (basics), Localhost Server, API Integration, QR Code Integration

Education

Bachelor of Engineering

Computer Science Engineering,Gopalan College of Engineering and management, Bengaluru

Year: 3rd Year

2023-2027

Projects

AI-Based Photo Organizer Using Face Recognition

- **Tech Stack:** Python, TensorFlow, InsightFace, OpenCV, Localhost Server, QR Code Integration
- Developed an AI-powered photo organization system that automatically classifies and groups images using face recognition.
- Trained detection models to identify individuals and categorize photos with improved accuracy and reduced manual effort.
- Integrated QR code-based photo sharing through a secure localhost server for faster accessibility.
- Enhanced user experience by enabling automated search, indexing, and retrieval of stored images.

Class Engagement Monitoring System (Hackathon Project – 2nd Place)

- **Tech Stack:** Python, Computer Vision, Facial Expression Analysis, InsightFace, OpenCV
- Built a real-time classroom engagement monitoring solution using computer vision to detect student attentiveness.
- Implemented face and expression recognition to identify behaviors such as yawning, talking, drowsiness, and inactivity.
- Designed dashboards that display participation metrics and engagement analytics to assist educators.
- Reduced classroom monitoring time and improved visibility into student learning patterns.

HEALTHCARE(Hackathon Project – 2nd Place)

- **Tech Stack:** Python, Web Interface, MySQL, API Integration
- Designed and developed a digital healthcare management platform for ASHA workers to manage beneficiary records efficiently.
- Implemented emergency alerts, ambulance dispatch requests, and follow-up tracking for critical medical cases.
- Added automated health bulletin announcements and notification features to streamline public health communication.
- Improved coordination between hospitals and field workers, reducing delays in patient support and documentation.

Other projects:

- **Pharmacy store management:** A website for the streamline workflow for medical stores.
- **Hospital helpdesk:** A software where staff's workflow and data is maintained.
- **Supermarket Management:** Software where all the items details are available with its supplied, expired dates and sold out date and other required details.

Achievements and other interests

Professional BGMI eSports Athlete: Qualified for BGIS Round 1; participated in national-level tournaments and online competitive leagues.

Content Creation: Photography, videography, and design for digital media and events.(canva, capcut, davinci resolve, adobe photoshop)

President of GRAFIK club, **Vice President** of club, **Secretary** of Club and hosted **TEDx**, **IEEE** and other professional events.

Soft Skills

- Communication
- Teamwork & Collaboration
- Problem-Solving
- Adaptability
- Leadership
- Willingness to Learn
